A COGNITIVIST ATTENTION-BASED SEMANTICS OF DIRECTIONALS

LOCATIONALS VS. DIRECTIONALS

▶ Locationals:

- ▶ e.g., *in the house*
- ▶ somehow static
- ▶ description of the place of some object

▶ Directionals

- ▶ e.g., *into/out of/through the house, from the roof,...*
- ▶ somehow dynamic
- ▶ description of the path of some object
- ▶ typically associated with locomotion (verbs)

All along the watch tower

princes kept the view

BOB DYLAN

ANSWERING THREE QUESTIONS

- ▶ What's „attention“ and „attention-based“?
- ▶ What's „Cognitivist“?
- ▶ What does that have to do with „Semantics(of directionals)“?
- ▶ taking three perspectives
 - ▶ the linguistic
 - ▶ the philosophical
 - ▶ the (neuro-)psychological

MOTIVATION: SELECTIVE ATTENTION: POP-OUT-PHENOMENON

Carstensen (2001): *Sprache, Raum und Aufmerksamkeit* (Tübingen: Niemeyer), p.101.

INSIGHT:

- ▶ not everything we see/perceive is (fully) processed
- ▶ not everything we see/perceive is available for conception and language
- ▶ selective attention **determines** what and how we conceptualize and linguistically categorize the world

LANGUAGE AND PERCEPTION (AND THE WORLD)

MIND/BRAIN

WORLD

THE SEMANTIC PROBLEM: HOW LANGUAGE RELATES TO ...

MIND/BRAIN

WORLD

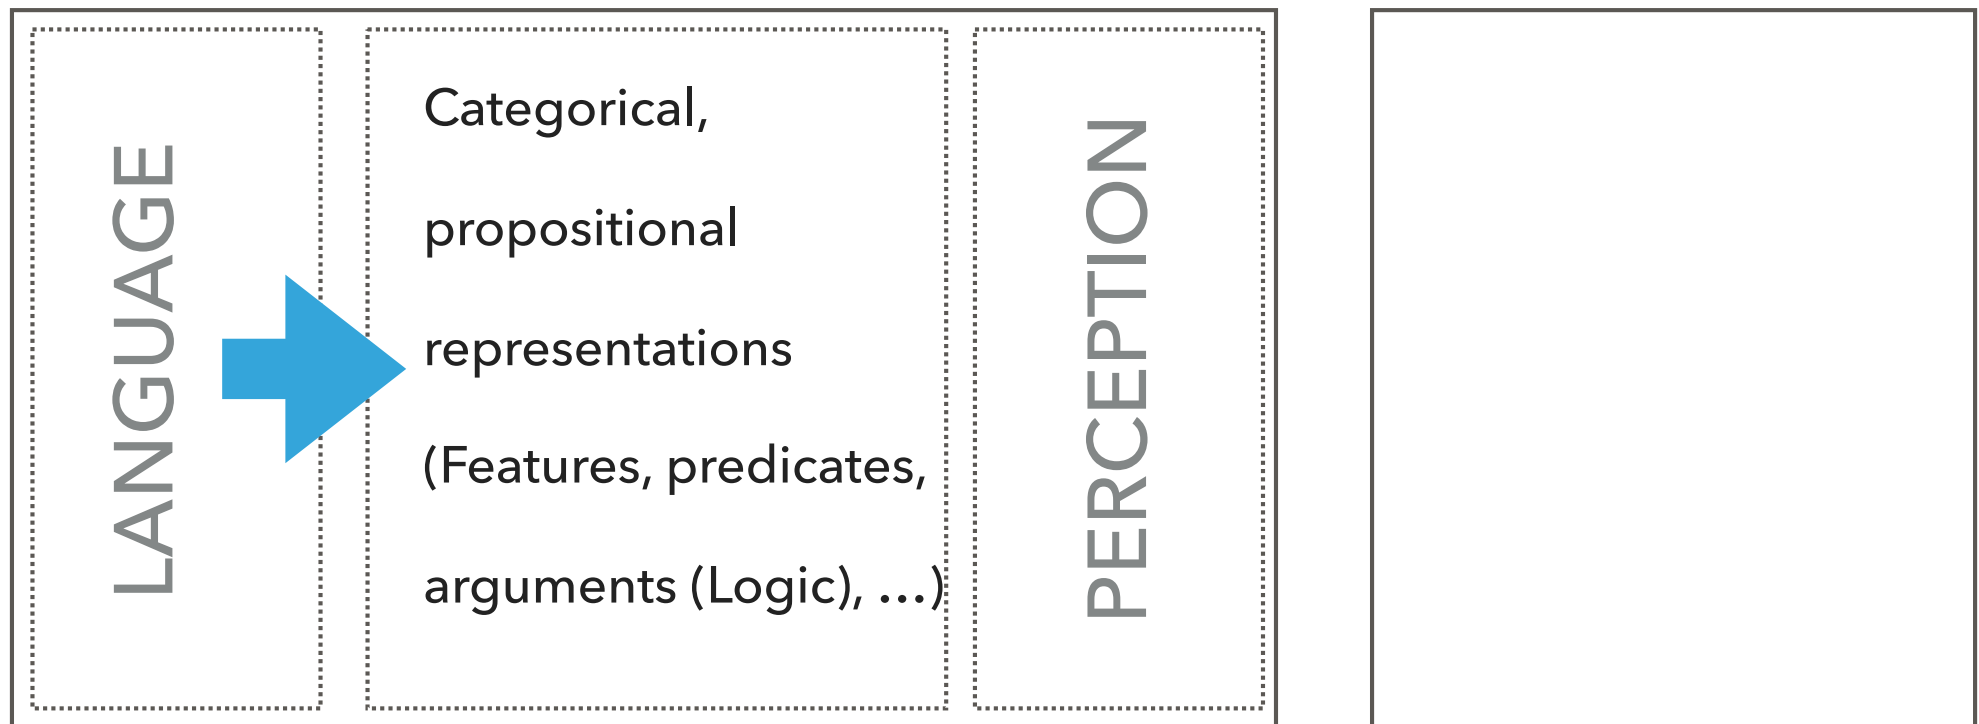

Logical semantics

THE SEMANTIC PROBLEM: HOW LANGUAGE RELATES TO ...

MIND/BRAIN

WORLD

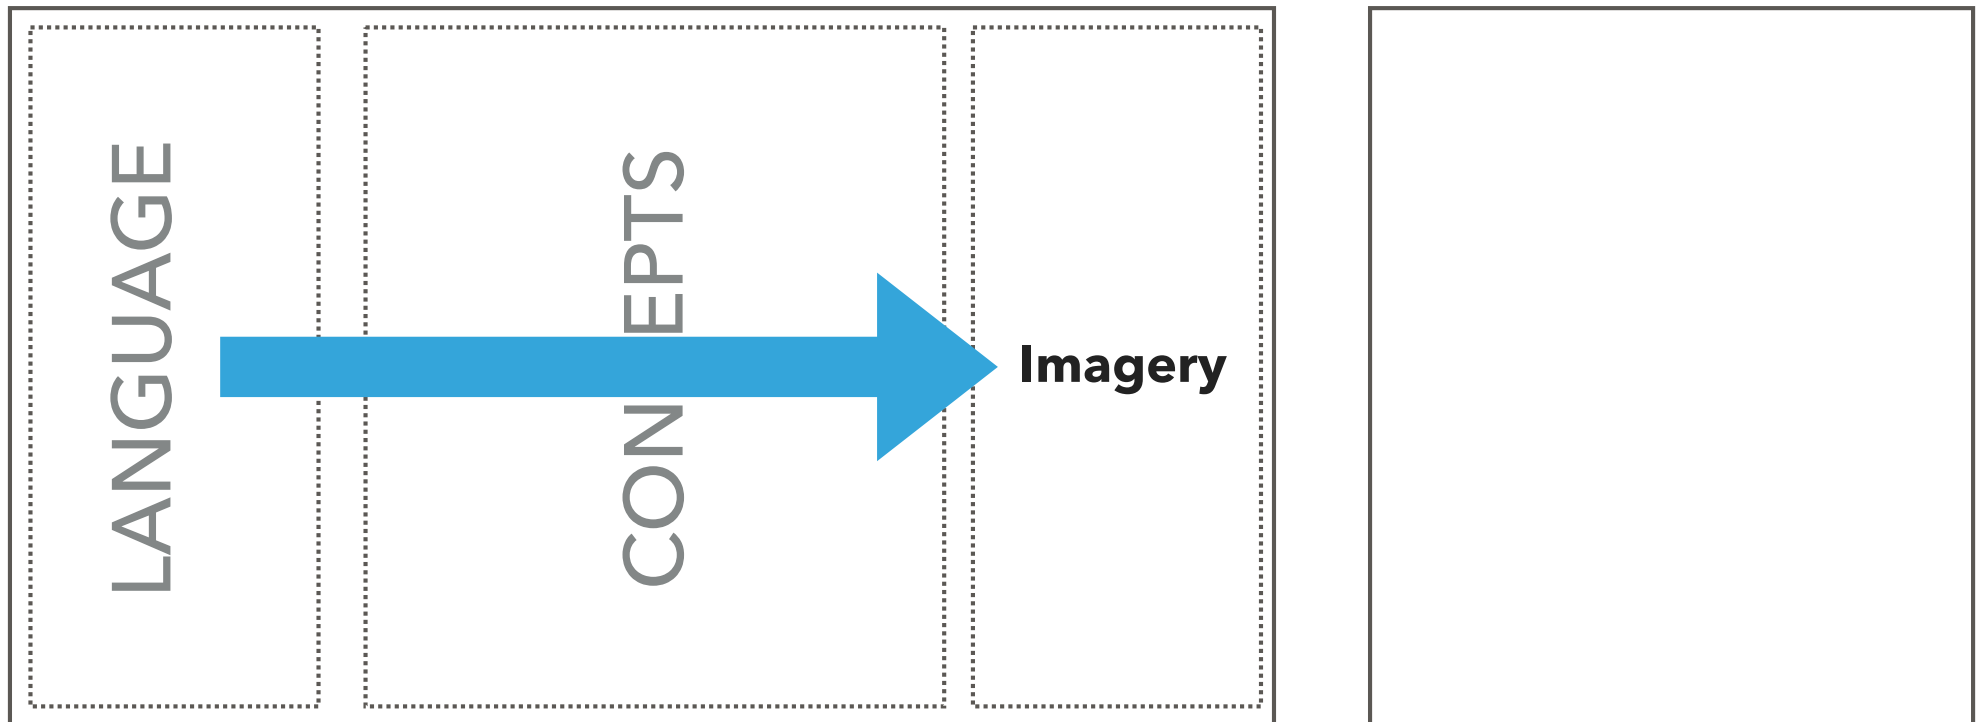

Classical, non-logical semantics (e.g., Miller/Johnson-Laird 1976)

THE SEMANTIC PROBLEM: HOW LANGUAGE RELATES TO ...

MIND/BRAIN

WORLD

Cognitive semantics (e.g., Lakoff 1987)

THE PHILOSOPHICAL PROBLEM: WHAT EXISTS IN THE WORLD?

MIND

WORLD

Particulars

(EIGER, BERN,

BARACK_OBAMA, ...)

Universals

((BEING_A_)PERSON,

RED, BEAUTY...)

Realism (e.g., Barry Smith)

THE PHILOSOPHICAL PROBLEM: WHAT EXISTS IN THE WORLD?

MIND

Universals

((BEING_A_)PERSON,

RED, BEAUTY...)

WORLD

Particulars

(EIGER, BERN,

BARACK_OBAMA, ...)

Conceptualism (e.g., Ockham)

THE PHILOSOPHICAL PROBLEM: WHAT EXISTS IN THE WORLD?

MIND

Particulars

(EIGER, BERN,
BARACK_OBAMA, ...)

Universals

((BEING_A_)PERSON,
RED, BEAUTY...)

WORLD

Cognitivism (e.g., Carstensen)

THE PROBLEM OF COGNITIVISM

- ▶ where do the structural distinctions of mental representations come from?
- ▶ (leaving aside ridiculous nativist assumptions)

by Akiyoshi Kitaoka

by Akiyoshi Kitaoka

for more on visual illusions visit Michael Bach's page at <http://www.michaelbach.de/ot/>

<http://www.michaelbach.de/ot/mot-motionBinding/index.html>

LESSON LEARNED

- ▶ our perception is evolutionarily adapted to the world „out there“
- ▶ some aspects of the world are represented and processed **pre-attentively**
- ▶ strange input or missing context leads to non-veridical interpretation

<http://www.michaelbach.de/ot/mot-sam/index.html>

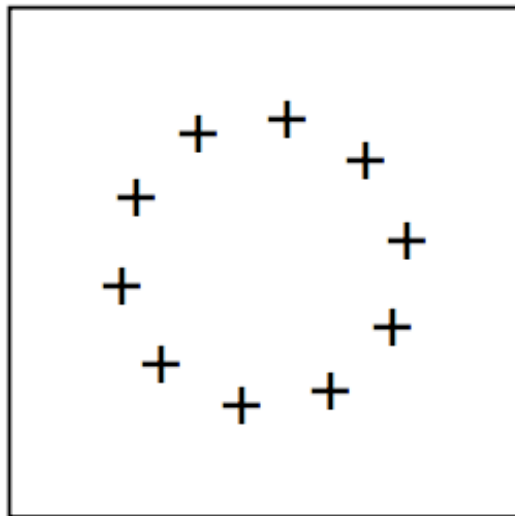

the time to identify a complex item (conjunctive search)
increases with the number of items

SELECTIVE ATTENTION I

- ▶ is necessary for conscious/higher representation
 - ▶ selects information for further processing, representation, learning, consciousness, language
- ▶ makes selected implicit information **explicit**
- ▶ imposes further structure on pre-attentively processed input
- ▶ categorical distinction:
 - ▶ focused attention
 - ▶ distributed attention

EXPERIMENTAL EVIDENCE (BELLUGI ET AL. 2001)

Stimulus

typical reproduction of
Downs-syndrome person

typical reproduction of
Williams-syndrome person

SELECTIVE ATTENTION II

- ▶ seems to operate on two levels simultaneously
 - ▶ global level
 - ▶ local level

SELECTIVE ATTENTION III

- ▶ attentional engagement is temporally restricted (in a temporal „window“ or „frame“)
 - ▶ followed by „disengagement“
 - ▶ disorder: simultanagnosia
 - ▶ with a „don't go directly back to where you just were“-mechanism („inhibition of return“)
- ▶ acts on different levels of representation („reference frames“)

SELECTIVE ATTENTION

- ▶ leads to the construction / re-cognition of
 - ▶ representations of the attended information
 - ▶ so-called „object-files“ (~particulars)
 - ▶ which are conceptually categorized by „concepts“ (~universals)

DYNAMIC SELECTIVE ATTENTION

- ▶ sequential attention („scanning“)
 - ▶ nb: not necessarily the same as eye fixations (scan paths)
- ▶ tracing an entity along some dimension
- ▶ tracking moving entities

THE COGNITIVIST PICTURE (SIMPLIFIED)

MIND/BRAIN

WORLD

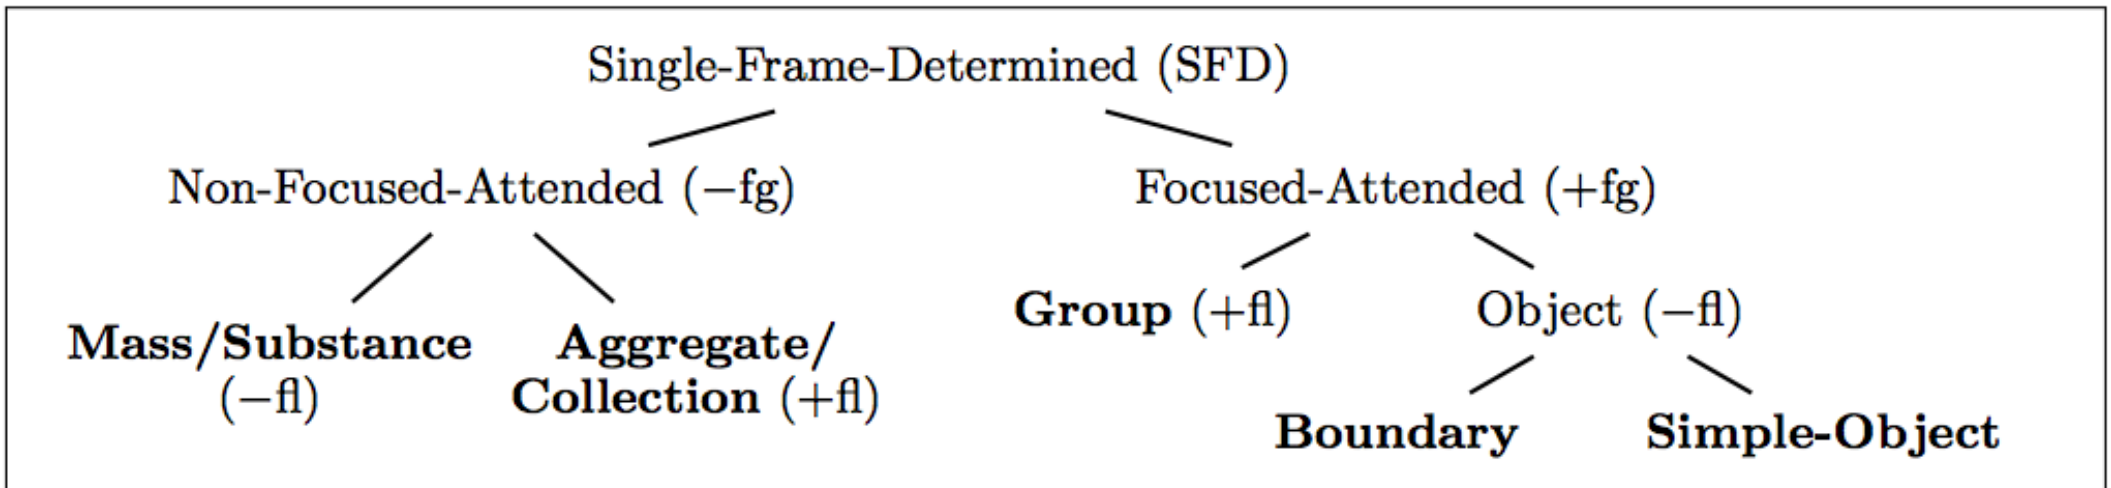

COGNITIVIST ONTOLOGY

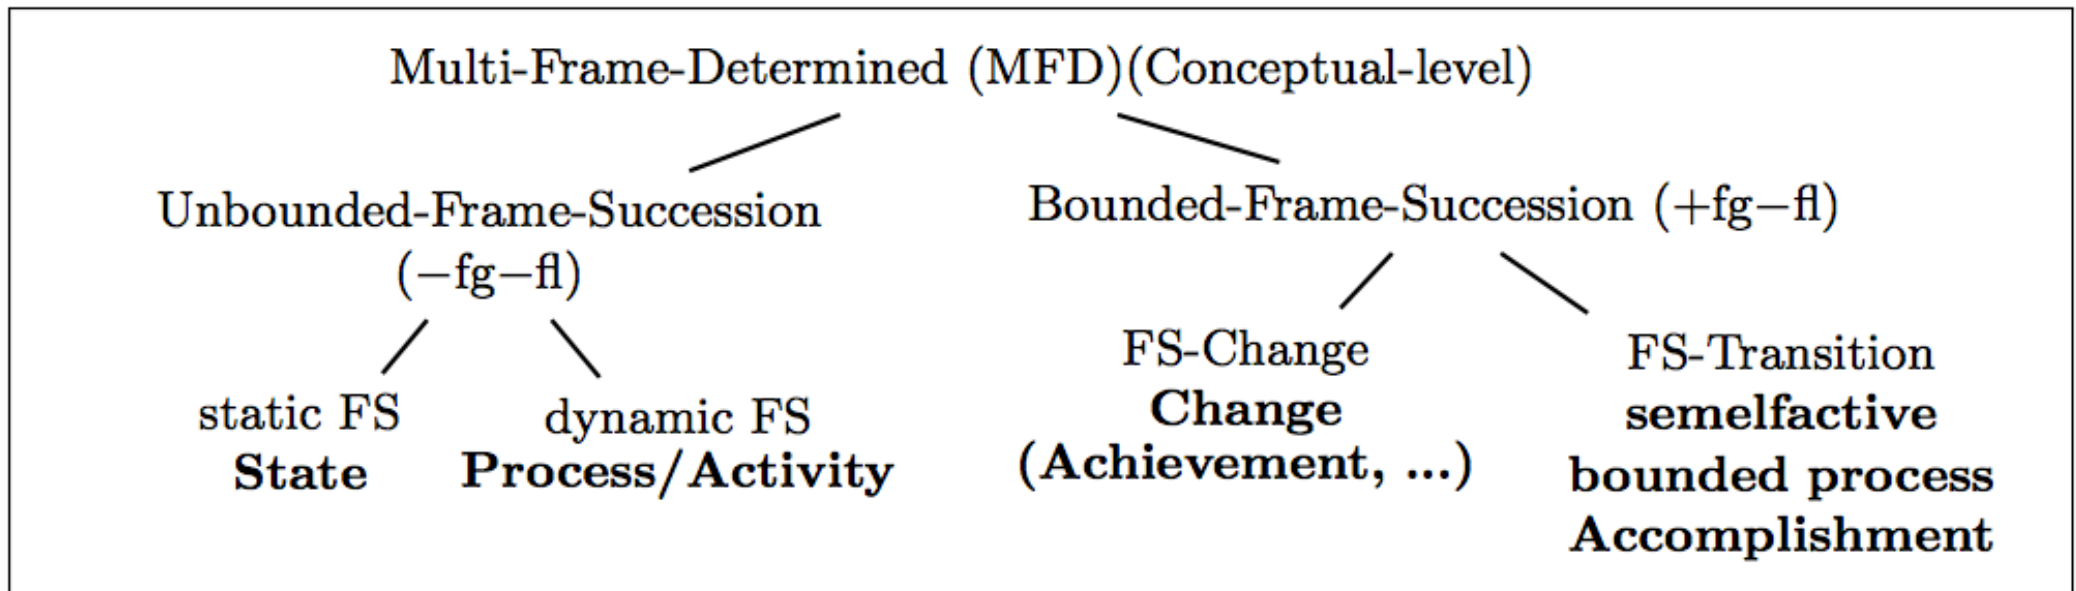

- ▶ i.e., the coarse structure of „what there is“ in the world from human perspective
- ▶ is based on aspects introduced
 - ▶ (focused/distributed, global/local, frames)
 - ▶ \pm focusedglobal, \pm focusedlocal
- ▶ Distinctions:
 - ▶ entities defined wrt. a single frame (~“Object“)
 - ▶ entities defined wrt. multiple frames (~“Event“)

Carstensen, Kai-Uwe (2010). Nicht-sprachliches Wissen. In: Kai-Uwe Carstensen, Christian Ebert, Cornelia Ebert, Susanne Jekat, Ralf Klabunde & Hagen Langer (eds.), *Computerlinguistik und Sprachtechnologie – Eine Einführung*. 3rd rev. ext. Springer Verlag, 532–543.
Carstensen, Kai-Uwe (2011). “Toward Cognitivist Ontologies”. In: *Cognitive Processing* 12 (4). 379–393.

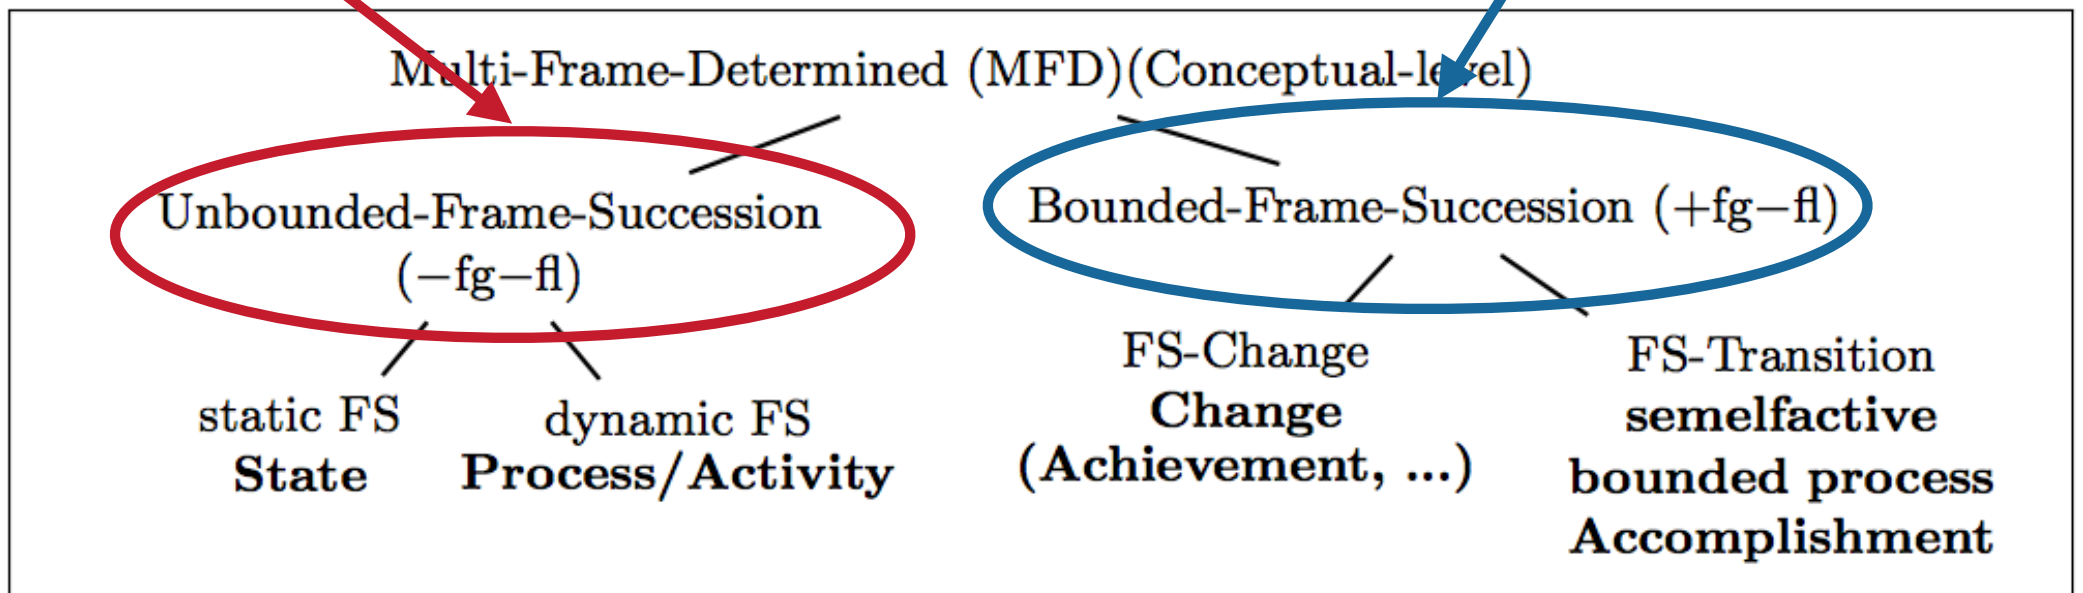

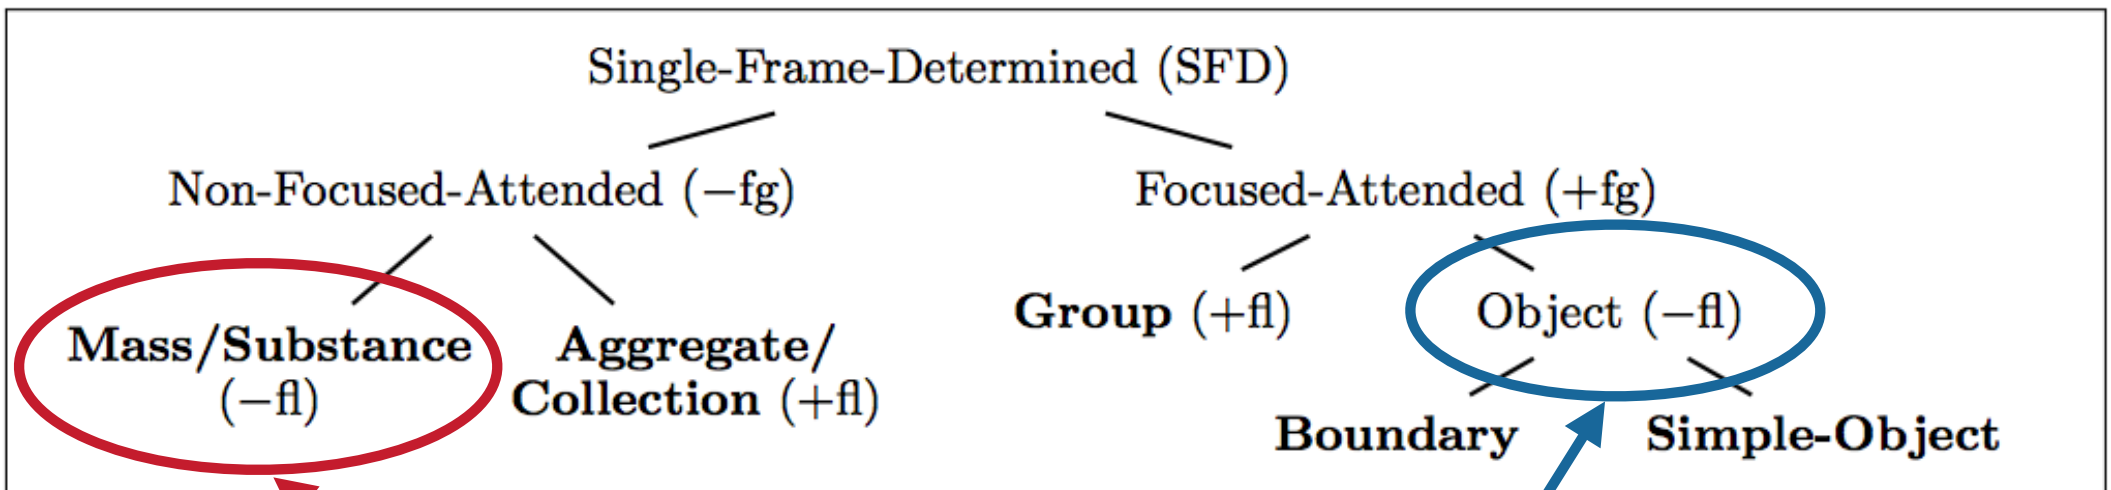

„OBJECTS“, UPPER LEVEL

„EVENTS“, UPPER LEVEL

EVENTS ARE DIFFERENT...

LOCATIONALS ARE INTERMEDIATE

- ▶ **x over/at/behind... y**
- ▶ attentional changes between SFD-entities
 - ▶ two possible directions!
 - ▶ for more cf.

Carstensen (2015), A Cognitivist Attentional Semantics of Locative Prepositions. In: *Attention and Meaning. The Attentional Basis of Meaning*. Ed. by Giorgio Marchetti, Giulio Benedetti, and Ahlam Alharbi (Hauppauge, NY: Nova Science Publishers), pp. 93-132.

LO: Located Object / Trajector

RO: Reference Object / Landmark

DIRECTIONALS

- ▶ *out of/ through/ along/ past/ into/ towards/... y, from x to y*
- ▶ not necessarily having a ‚direction‘:
 - ▶ *around/through the house*
- ▶ typically associated with locomotion (verbs)
 - ▶ and typically modelled wrt. time
- ▶ but: fictive motion
 - ▶ *the mountain range goes from Canada to Mexico*
 - ▶ *the river runs through the valley*

PROBLEM #1: CLASSIFICATION OF DIRECTIONALS

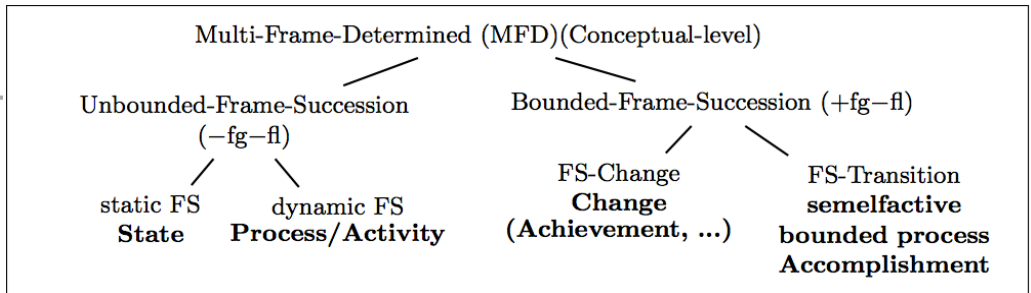

▶ Zwarts' (2008) proposal (only graphical definition):

- ▶ **Source** expressions (*from X, out of X,...*): [++++++ - - - - -]
- ▶ **Goal** expressions (*to X, into X,...*): [- - - - - ++++++]
- ▶ **Route** expressions (*past X, over X,...*): [- - - - +++++ - - - -]
- ▶ **Comparative** expressions (*towards X, away from X, up, down,...*):
[+++++]
- ▶ **Constant** expressions (*along/through X,...*): [+++++]
- ▶ **Geometric** expressions (*around X,...*): (no pattern diagram)

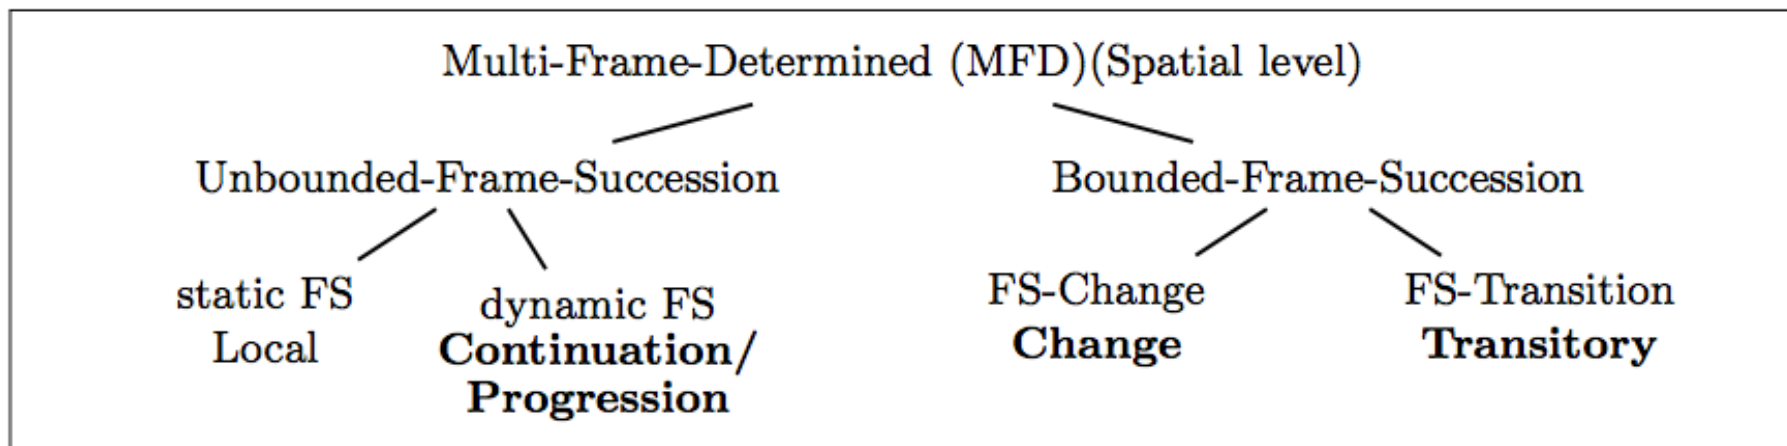

▶ Pantcheva (2010)'s extension:

- ▶ **Egressive** expressions (*starting from X,...*): [+ - - - - - - - - -]
- ▶ **Terminative** expressions (*up to X,...*): [- - - - - - - - +]

COGNITIVIST PROPOSAL I

- ▶ Some directionals are **inherently phasal**, locationals fit in the scheme!
 - ▶ they code the „situational“ spatial structure wrt. some object
 - ▶ multiple (MFD) description of its spatial property (change)

Constants, Source, Goal, Route, Comparatives, (both)

INHERENT ASPECTS OF DIRECTIONALS, Z.B.

COGNITIVIST PROPOSAL II

- ▶ Some directionals are to be characterized **exherently**
 - ▶ wrt. **form** aspects: *around the house*
 - ▶ wrt. **gestalt** aspects (i.e. to relevant dimensions):
 - ▶ *along/across/ up/ down the street*
 - ▶ wrt. the **previous phase (exherently phasal)**:
 - ▶ *go back*

EXHERENT ASPECTS OF DIRECTIONALS, AXIAL

- ▶ Sequential attention to subject's/object's spatial referent
- ▶ **and** some collinear one-dimensional path (e.g. *down*)
- ▶ **or** some one-dimensional path of RO (e.g. *across the street*)
- ▶ **or** some collinear one-dimensional path of RO (e.g. *along the street*)

Lang, Ewald, Kai-Uwe Carstensen, and Geoffrey Simmons (1991): *Modelling Spatial Knowledge on a Linguistic Basis: Theory - Prototype - Integration*. Lecture Notes in Artificial Intelligence 481. Springer.

COGNITIVIST PROPOSAL III

- ▶ In addition:
 - ▶ static („ATT“) vs. dynamic („SCAN“, „TRACK“, „TRACE“) attention is assumed to be represented
 - ▶ usable for semantic distinctions

CLASSIFICATION GRID/DECISION TABLE AS IN MILLER/J.-L.

linguistic expressions (senses)	standard type	Dynamicity of attention wrt. LO	MFD-category	exherent property	Dynamicity of attention wrt. RO
Locationals	Place	ATT	Local	no	ATT
through/over/ towards	Constant	SCAN	Continuation	no	ATT
along/across/up/ around/alongside	Geometric/ Constant	SCAN	Continuation	yes	TRACE
alongside/ahead of	Constant	SCAN	Continuation	no	TRACK
from/to/ into/ out of	Source/Goal	SCAN	Change	no	ATT
past/over	Route	SCAN	Transitory	no	ATT
across	Route	SCAN	Transitory	yes	ATT

btw.: there is evidence that **from/to** are the sides of a Change-coin

cp.: *We went out of the house (and) into the garden*

We drove from Hamburg (*and) to Berlin

WE'VE COME TO THE END, THANK YOU!
